## Author index volume 350 (2006)

The issue number is given in front of the page numbers.

|  |               |
|--|---------------|
| Amano, K. and A. Maruoka, On learning monotone Boolean functions under the uniform distribution  | (1) 3–12      |
| Bojańczyk, M. and T. Colcombet, Tree-walking automata cannot be determinized   | (2–3) 164–173 |
| Bshouty, N.H. and L. Burroughs, Maximizing agreements and coagnostic learning  | (1) 24–39     |
| Burroughs, L., <i>see</i> N.H. Bshouty   | (1) 24–39     |
| Cesa-Bianchi, N., R. Reischuk and T. Zeugmann, Foreword  | (1) 1–2       |
| Colcombet, T., <i>see</i> M. Bojańczyk   | (2–3) 164–173 |
| Dawar, A., E. Grädel and S. Kreutzer, Backtracking games and inflationary fixed points   | (2–3) 174–187 |
| Deng, Y. and D. Sangiorgi, Towards an algebraic theory of typed mobile processes   | (2–3) 188–212 |
| Faggian, C., Interactive observability in Ludics: The geometry of tests  | (2–3) 213–233 |
| Forster, J. and H.U. Simon, On the smallest possible dimension and the largest possible margin of linear arrangements representing given concept classes | (1) 40–48     |
| Fronhöfer, B. and A. Yamamoto, Hypothesis finding with proof theoretical appropriateness criteria  | (1) 140–162   |
| Ghica, D.R., A.S. Murawski and C.-H.L. Ong, Syntactic control of concurrency   | (2–3) 234–251 |
| Grädel, E., <i>see</i> A. Dawar  | (2–3) 174–187 |
| Haghverdi, E. and P. Scott, A categorical model for the geometry of interaction  | (2–3) 252–274 |
| Hayashi, S., Mathematics based on incremental learning—Excluded middle and inductive inference   | (1) 125–139   |
| Köbler, J. and W. Lindner, The complexity of learning concept classes with polynomial general dimension  | (1) 49–62     |
| Kreutzer, S., <i>see</i> A. Dawar  | (2–3) 174–187 |
| Laird, J., A calculus of coroutines  | (2–3) 275–291 |
| Lindner, W., <i>see</i> J. Köbler  | (1) 49–62     |
| Martin, É., A. Sharma and F. Stephan, Unifying logic, topology and learning in Parametric logic  | (1) 103–124   |
| Martin, K., Entropy as a fixed point   | (2–3) 292–324 |
| Maruoka, A., <i>see</i> K. Amano   | (1) 3–12      |
| Miyahara, T., <i>see</i> Y. Suzuki   | (1) 63–90     |
| Murawski, A.S., <i>see</i> D.R. Ghica  | (2–3) 234–251 |
| Ong, C.-H.L., <i>see</i> D.R. Ghica  | (2–3) 234–251 |
| Reidenbach, D., A non-learnable class of E-pattern languages   | (1) 91–102    |
| Reischuk, R., <i>see</i> N. Cesa-Bianchi   | (1) 1–2       |
| Sangiorgi, D., <i>see</i> Y. Deng  | (2–3) 188–212 |
| Sannella, D., Preface  | (2–3) 163–163 |
| Schweikardt, N., On the expressive power of monadic least fixed point logic  | (2–3) 325–344 |
| Scott, P., <i>see</i> E. Haghverdi   | (2–3) 252–274 |
| Serre, O., Games with winning conditions of high Borel complexity  | (2–3) 345–372 |
| Servedio, R.A., On learning embedded midbit functions  | (1) 13–23     |
| Sharma, A., <i>see</i> É. Martin   | (1) 103–124   |
| Shoudai, T., <i>see</i> Y. Suzuki  | (1) 63–90     |
| Simon, H.U., <i>see</i> J. Forster   | (1) 40–48     |
| Stephan, F., <i>see</i> É. Martin  | (1) 103–124   |
| Suzuki, Y., T. Shoudai, T. Uchida and T. Miyahara, Ordered term tree languages which are polynomial time inductively inferable from positive data        | (1) 63–90     |
| Uchida, T., <i>see</i> Y. Suzuki   | (1) 63–90     |
| Yamamoto, A., <i>see</i> B. Fronhöfer  | (1) 140–162   |
| Zeugmann, T., <i>see</i> N. Cesa-Bianchi   | (1) 1–2       |
